24th May 2018: Oculoplastic Teaching Day at Royal College of Ophthalmologists' Annual Congress by Saj Ataullah

The Royal College of Ophthalmologists (RCOphth) acts as the voice of the ophthalmology profession in the UK. The College sets the curriculum and examinations for trainee ophthalmologists, provides training in eye surgery, maintains standards in the practice of ophthalmology, and promotes research and scientific advances in the specialty.

The RCOphth Annual Congress is a 4-day meeting where ophthalmologists from the UK and overseas come together to learn about the latest advances in our understanding of ophthalmic diseases and the latest techniques to treat disorders.

The 24th May was dedicated to subspecialty teaching. The Oculoplastic Teaching Day was organized by Mr Austin McCormick, Consultant Oculoplastic Surgeon in Aintree.

Mr Saj Ataullah was invited to speak about Orbital Inflammatory Disorders, present his surgical techniques for correction of various common eyelid disorders and present challenging cases and lessons learnt.
